MANDATORY WATER CONSERVATION NOTICE

Initiated: July 16, 2021

The Stonington Water Company has limited water resources during the summer months, especially with how busy the Town is this year. This is currently limiting the ability of the water system to maintain the water storage tank at an acceptable level. The Water Company is working on increasing its current level of water production in an effort to maintain the tank level. In the meantime, it is essential that everyone practice water conservation due to the current water production shortage.

The Water Company is authorized to restrict water use during periods of limited water supply events. Purchasing water will be a costly option for the Water Company and its connected customers; therefore, we are hoping to avoid this option. There are many ways that the public can assist to conserve water whether residential or commercial.

We have listed some basic conservation practices below:

- Turn off the water when not in use.
- Limit use of water for irrigation purposes especially for lawn watering. Do not leave hoses running.
- Reduce the amount of water used when conducting normal household tasks.
- Reduce the amount of water used at restaurants and other commercial businesses by communicating with personnel on the importance of conservation.
- Minimize car washing and cleaning of outside buildings or other uses of water which can wait until the shortage is over.
- Report all wasteful water uses observed to the Water Company.

REPORT ALL WATER LEAKS TO WATER COMPANY IMMEDIATELY. IT IS ESSENTIAL TO REPORT ALL LEAKS EVEN IF THEY HAVE BEEN REPAIRED.
